Showcase Day

As I mentioned in the last HH our science lessons have been discussing plant and animal adaptations. Our big question has been, "How can we, as animal scientist, design an animal which would be able to survive in a Missouri ecosystem?" Last week the students started designing their ecosystem and this week we are continuing to work on that, but we are also beginning to create our animals, with adaptations, that would survive in the ecosystem they are designing.

We will have our Showcase Day for these projects from 1:30 to 2:30 next Friday afternoon, September 28. Please stop by if you are available.

Homework

Since homework started a couple of weeks ago we have heard some creative stories with strong ideas. I'm looking forward to listening to the stories this year. The students are expected to complete their homework each night. If something comes up and your child is not able to complete their homework on a particular night please send a note or an email letting me know. Thanks for your cooperation in making sure homework is completed.

The last edition of the HH listed what we were doing in each subject area. As we change units, goals and/or topics I will update that information.

MATH –

- Students will be able to make sense of problems and persevere in solving them.
- Students will be able to communicate mathematically.
- Students will be able to solve problems involving measurement and conversion of measurements.
